2 structured data items are invalid About this issue: This issue is triggered if structured data items contain fields that do not meet Google's guidelines . Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings. For more information on the structured data requirements, see schema.org , Google documentation , or our article . How to fix: Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results. We recommend that you use the Rich Results Test tool to review and validate your pages' structured data against their rich snippet requirements.	2 ↑ 1

Warnings

Warnings

Project name: lightspeedghost.com

Warnings	Amount
1 page has too much text within the title tag About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article How to fix: Try to rewrite your page titles to be 70 characters or less.	1 ↑ 1
1 page doesn't have an h1 heading About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.	1 0
1 page has low text-HTML ratio About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	1 0

Warnings	Amount
1 page has a low word count About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.	1 0
1 page has a JavaScript and CSS total size that is too large About this issue: This issue is triggered if the total transfer size of the JavaScript and CSS files used on your page exceeds 2 MB. The size of the JavaScript and CSS files used on a webpage is one of the important factors for a page's load time. Having lots of clunky JavaScript and CSS files make your webpage "heavier" in weight, thus increasing its load time. This in turn leads to a poor user experience and lower search engine rankings. For more information, please see this Google article. How to fix: Review your pages to make sure that they only contain necessary JavaScript and CSS files. If all resources are important for your page, consider reducing their transfer size.	1 0
0 external links are broken	0 0

Invalid structured data items

Project name: lightspeedghost.com

Detailed Issue Description

About this issue:

This issue is triggered if structured data items contain fields that do not meet [Google's guidelines](#).

Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results.

If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings.

For more information on the structured data requirements, see [schema.org](#), [Google documentation](#), or [our article](#).

How to fix:

Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results.

We recommend that you use the [Rich Results Test](#) tool to review and validate your pages' structured data against their rich snippet requirements.

Low text to HTML ratio

Project name: lightspeedghost.com

Detailed Issue Description

About this issue:

Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.

Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.

Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix:

Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.
